

# DSA LAB ASSIGNMENT - 3

Mon 11/10/20  
API 19/11/20  
CSE - F

1) Insertion sort algorithm in C.

```
#include <stdio.h>
```

```
int main()
```

```
{  
    int n, arr[100], c, b, a arr, flag = 0;
```

```
    printf("Enter no. of elements");
```

```
    scanf("%d", &n);
```

```
    for (c = 0; c < n; c++)
```

```
        scanf("%d", &array[c]);
```

```
    for (c = 0; c < n - 1; c++) {
```

```
        t = array[c];
```

```
        for (b = c - 1; b >= 0; b--) {
```

```
            if (array[b] > t) {
```

```
                array[b + 1] = array[b];
```

```
                flag = 1;
```

```
            }
```

```
            else
```

```
                break;
```

```
        }
```

```
        if (flag)
```

```
            array[b + 1] = t;
```

```
    }
```

```
    printf("Sorted list");
```

```
    for (c = 0; c < n; c++)
```

```
        printf("%d", array[c]);
```

```
    }
```

```
    return 0;
```

2) selection sort algorithm in c

```
#include <stdio.h>
```

```
int main()
```

```
{
```

```
int array[100], n, c, b, position, a;
```

```
printf ("Give no. of elements");
```

```
scanf ("%d", &n);
```

```
printf ("Enter
```

```
for (c=0; c<(n-1); c++)
```

```
{
```

```
position=c;
```

```
for (d=c+1; d<n; d++)
```

```
{
```

```
if (array[position] > array[d])
```

```
position = d;
```

```
}
```

```
if (position != c)
```

```
{
```

```
a = array[c]
```

```
array[c] = array[position];
```

```
array[position] = a;
```

```
}
```

```
}
```

```
for (c=0; c<n; c++);
```

```
printf ("%d", array[c]);
```

```
return 0;
```

```
}
```

3) C program for Bubble sort algorithm.

```
#include <stdio.h>
```

```
int main()
```

```
{
```

```
int array[100], n, a, b, swap;
```

```
printf ("Give no. of elements");
```

```
scanf ("%d", &n);
```

```
for (c = 0; c < n; c++)
```

```
scanf ("%d", &array[c]);
```

```
for (c = 0; c < n - 1; c++)
```

```
{
```

```
for (b = 0; b < n - 1 - c; b++)
```

```
{
```

```
if (array[b] > array[b + 1])
```

```
{
```

```
swap = array[b];
```

```
array[b] = array[b + 1];
```

```
array[b + 1] = swap;
```

```
}
```

```
}
```

```
for (c = 0; c < n; c++)
```

```
printf ("%d", array[c]);
```

```
return 0;
```

```
}
```

# 1) MERGE SORT Algorithm in C.

```
#include <stdio.h>
```

```
#include <conio.h>
```

```
#define max size 5
```

```
void merge-sort (int i, int j);
```

```
void merge-sort (int i, int j, int k);
```

```
int arr-sortmax [size];
```

```
int main ()
```

```
{
```

```
printf ("Enter elements for sorting: \n", max  
size);
```

```
for (i=0; i < max-size; i++)
```

```
scanf ("%d", &arr-sort[i]);
```

```
for (i=0; i < max-size; i++)
```

```
printf ("%d", arr-sort[i]);
```

```
}
```

```
merge-sort (0, max-size-1);
```

```
for (i=0; i < max-size; i++)
```

```
printf ("%d", arr-sort[i]);
```

```
}
```

```
getch();
```

```
void merge-sort (int i, int j)
```

```
{
```

```
if (i < j)
```

```
{
```

```
merge-sort (i, n);
```

```
merge-sort (n+1, j);
```

```
merge-array (i, n+1, j);
```

```
}
```

```
}
```

```
void merge-sort (int x, int z, P) {
```

```
    int t [50];
```

```
    int i = x, j = z, k = 0;
```

```
    while (i <= u && j <= P) {
```

```
        if (arr-sort[i] < arr-sort[j])
```

```
            t[k++] = arr-sort[i++];
```

```
        else
```

```
            t[k++] = arr-sort[j++];
```

```
    }
```

```
    while (i <= y)
```

```
        t[k++] = arr-sort[i++];
```

```
    while (j <= P)
```

```
        t[k++] = arr-sort[j++];
```

```
    for (i = x, j = 0; i <= P; i++, j++)
```

```
        arr-sort[i] = t[j];
```

```
    }
```

---

5) C program for heap sort algorithm.

```
#include <stdio.h>
```

```
void main()
```

```
{
```

```
    int heap[10], n, i, j, o, root, temp;
```

```
    printf ("Give no. of elements ");
```

```
    scanf ("%d", &n);
```

```
    for (i = 0; i < n; i++)
```

```
        scanf ("%d", &heap[i]);
```

```
    for (i = 1; i < n; i++)
```

```
    {
```

```
        o = i;
```

```
    }
```

```

do
{
    root = (0-1)/2;
    if (heap[root] < heap[0])
    {
        temp = heap[root];
        heap[root] = heap[0];
        heap[0] = temp;
    }
    c = root;
} while (c != 0);

for (i = 0; i < n; i++)
    printf("%d", heap[i]);
for (j = n-1; j >= 0; j--)
{
    temp = heap[0];
    heap[0] = heap[j];
    heap[j] = temp;
    root = 0;
    do
    {
        c = 2 * root + 1;
        if (c < heap[c] < heap[c+1] && c < j-1)
            c++;
        if (heap[root] < heap[c] && c < j)
        {
            temp = heap[root];
            heap[root] = heap[c];
            heap[c] = temp;
        }
        root = c;
    } while (c < j);
}
for (i = 0; i < n; i++)
    printf("%d", heap[i]);
return(0);
}

```
